Key takeaway

In 2021, couples without children was the most common household type among households in Burdekin (S), accounting for 29.1% (2,085 households). This share was higher than Regional Qld (27.3%). Since 2016, the biggest change was in couples with children, which decreased by 235 households and 3 percentage points.

About this topic

Household type summarises the mix of household and family structures in an area, such as couples with children, lone person households, and one-parent families. It is one of the clearest indicators of how people live together and the residential role of an area.

This topic is useful for planning services, facilities, and housing because demand is closely tied to household structure. It is best read with households with children, households without children, household size, age structure, and dwelling type.

Interpretation notes

- This is a derived household-composition view built from relationships within dwellings, so it summarises household structure rather than a single Census question.

- It is dwelling-based, which means different household types can reflect both family structure and housing arrangements.
