Key takeaway

In 2021, 3-bedroom dwellings was the most common bedroom count among occupied private dwellings in Denmark (S), accounting for 41.1% (1,129 dwellings). This share was higher than Regional WA (35.2%). Since 2016, the biggest change was in 4-bedroom dwellings, which increased by 77 dwellings and 0.5 percentage points.

About this topic

Number of bedrooms per dwelling records the bedroom count of occupied private dwellings. It is a simple but useful indicator of dwelling size and housing capacity.

This topic is most informative when read with dwelling type, household size, and household type. Together, these measures can help identify whether housing stock is suited to local household needs and can signal issues such as crowding or affordability pressure.

Interpretation notes

- The count refers to bedrooms in occupied private dwellings, not the total number of rooms.

- Bedroom count can suggest dwelling capacity, but it should be read with household size before drawing conclusions about crowding.
